

Stools: Alternative work chairs made simple

Albion Chairs has always been synonymous with **ergonomic and orthopaedic seating** in the workplace and since the launch of Spynamics in 1999, we have been at the cutting edge of innovative developments in seating technologies. Furthermore, over the last 4 years we have added a selection of seating solutions for users who may not be sitting at a standard, static height desk (approx. 720mm).

Whether working at microscopes, on an assembly line, at a sitstand desk or any number of non-standard workstations, Albion Chairs has the solution. In particular, we now provide the renowned saddle seat with or without a choice of three backs to add comfort for prolonged sitting. The mechanism allows for seat and back tilt, and seat and backrest height. The working height can be adapted by using different bases and gas lifts and by using alternative castors will allow easy manoeuvrability on various floor surfaces. The saddle seat enables the hip joint of the user to be kept at an optimal angle of 135 degrees which encourages the spine into its natural "S" shape and thus there is much less stress on the vertebrae and the discs in the back.

Contact us for an "At-your-desk assessment" so that we can provide the correct chair based on the users' physique, workstation and job function.

Other ergonomic options include:

- Foot and leg rests
- An electric SitStand desk complete with a wide range of desk accessories
- **Choice of colours** from the Camira Xtreme Plus and X2 fabric range
